

Turntable platter mat

AMTS-03

Specifications

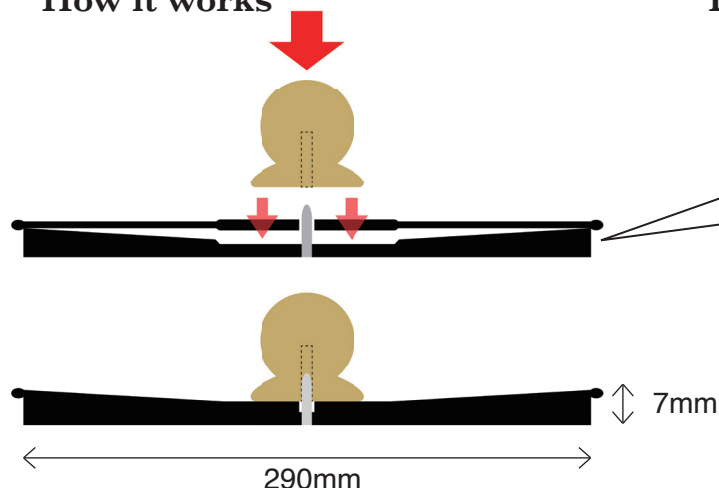

Material	Aluminum
----------	----------

Diameter	290 mm
Thickness	7 mm
Weight	Approx. 985g

Features

- Shape the platter mat with a slight incline toward the center, creating a very shallow, mortar-like concave surface. It makes the vinyl record integrates with the turntable sheet, and becomes unified with the turntable.
- A conductive layer on anodized surface formed by our sophisticated technology suppresses the generation of static electricity.
- Advanced flatness processing on the back side of the platter mat.
- Award winning product (by audio magazine in Japan)
- Designed and made in Japan, RoHS compliant.

How it works

Enlarged image

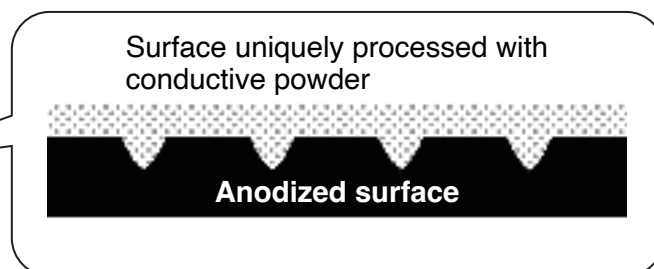

Photo: Turntable platter mat and stabilizer(AMDS-01)

The weight of the stabilizer integrates vinyl record with turntable platter mat and turntable. It suppresses any wobbling or shaking of vinyl record and prevents unnecessary vibrations toward the cantilever, allowing the information engraved in the grooves of vinyl record to be maximally extracted.

It also prevents scratches on the vinyl record, tear and wear of the stylus.

*It is necessary to use with our stabilizer AMDS-01(sold separately)
